BidMart Auth UI

A clear authentication journey for a marketplace

REACT ROUTER | TYPESCRIPT | TAILWIND

THE IDEA

A focused interface for account access and recovery.

Agency collaborator: shiowoneko

PROJECT BRIEF / 05

BidMart Auth UI

WHAT THE PROJECT DOES

A focused interface for account access and recovery.

THE PROBLEM

Marketplace users need understandable login, registration and account recovery paths before bidding or selling.

CREDIT / ROLE

shiowoneko. Agency collaborator project; exact module contribution was not specified.

SOLUTION & STACK / 05

BidMart Auth UI

HOW IT WORKS

The React Router front end includes dedicated login, registration and password recovery routes with typed components and a consistent visual system.

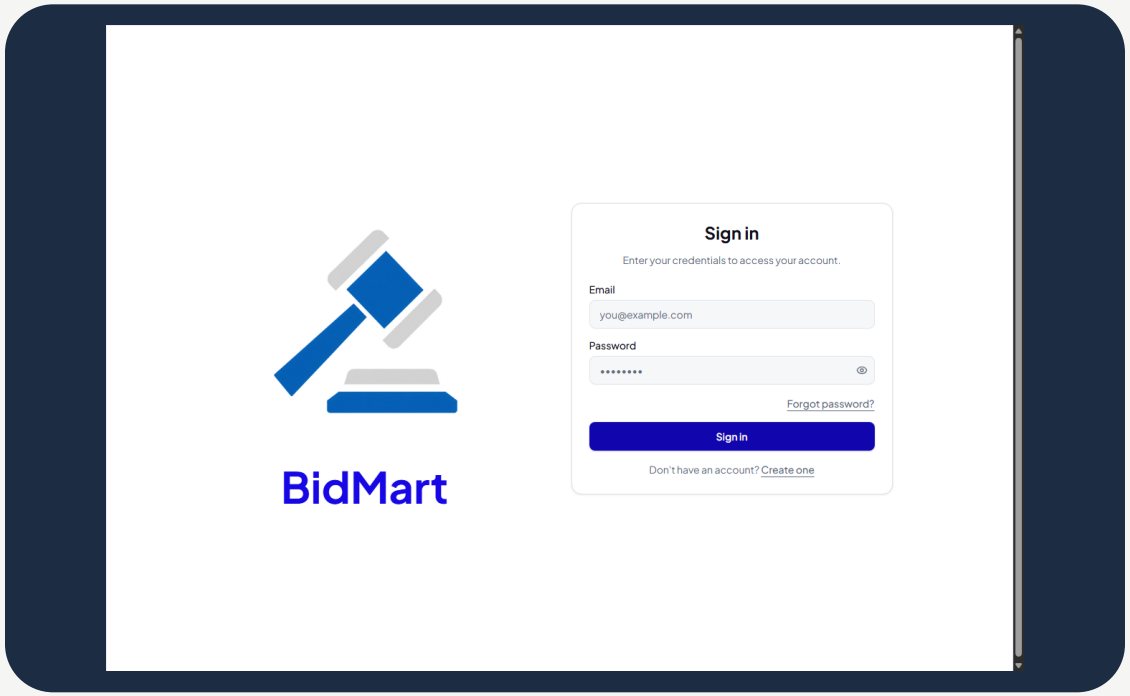

FEATURES

- Login and registration routes
- Forgot-password flow
- Responsive, typed UI

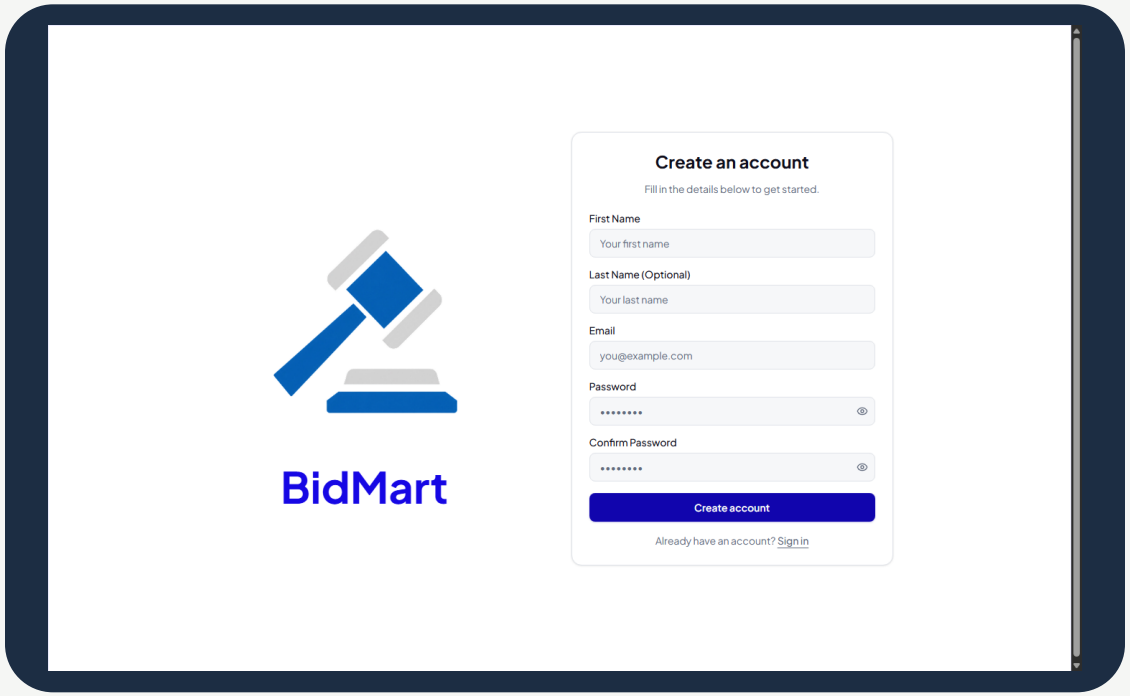

TECH STACK

React Router / TypeScript / Tailwind

BidMart Auth UI

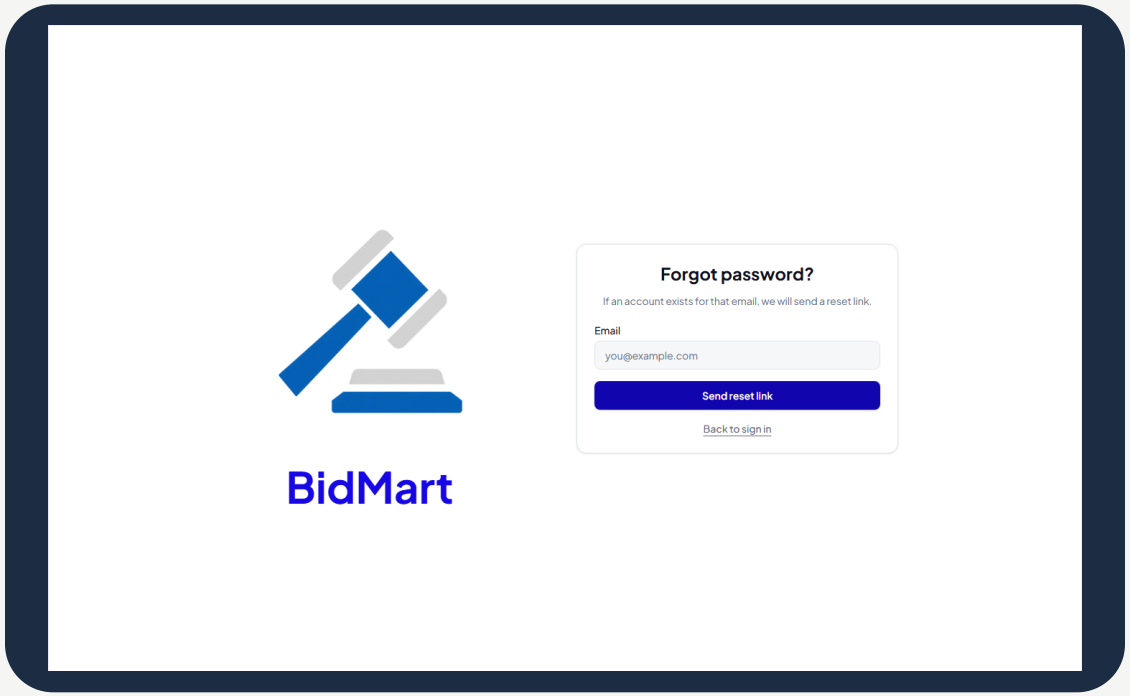

Actual local login route

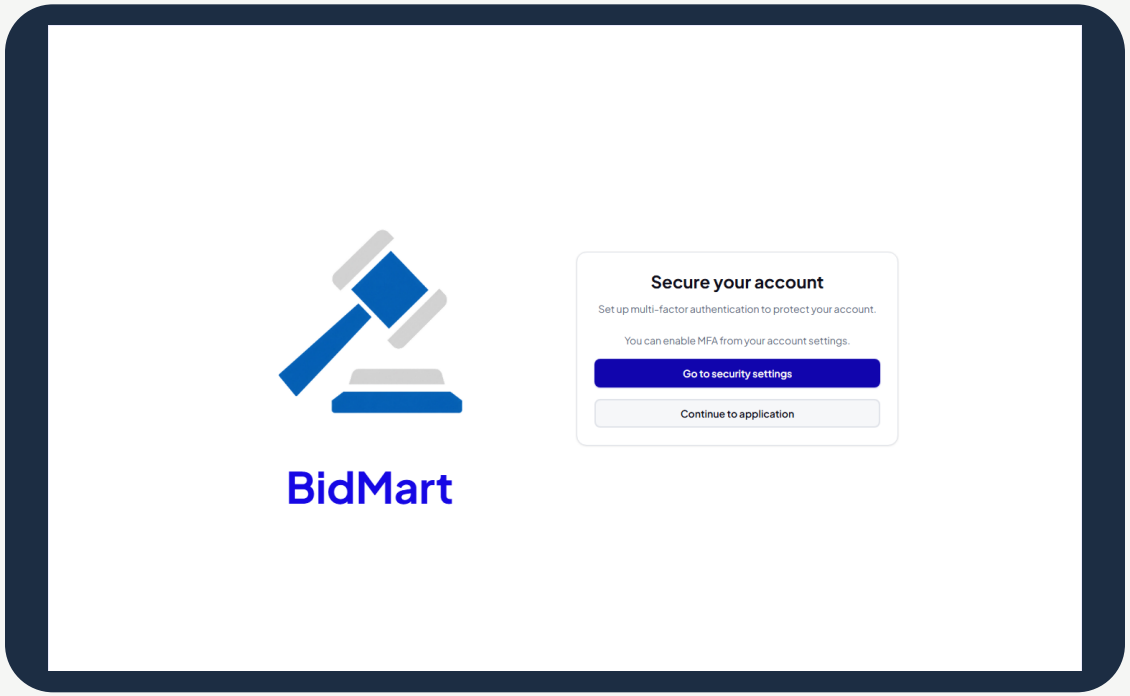

Actual local registration route

RESULT & HANDOFF / 05

BidMart Auth UI

VERIFIED OUTCOME

The production build succeeded. Login, registration, password recovery and MFA-offer routes rendered locally and were captured in headless Chrome. These route previews do not prove a completed browser login.

LOCAL CHECK

RUN: Production build passed; four local auth route states captured. A separate Rust API was also run; end-to-end browser login remains unverified.
