RagaSpace

A mobile-first venue booking experience

FLUTTER DART REST API

THE IDEA

Find, compare and book sports venues in one place.

Admin module + home screen (team project)

SOURCE / github.com/Kelompok-C07-PBP-C/TKPASMobileRagaSpace

PROJECT BRIEF / 01

RagaSpace

WHAT THE PROJECT DOES

Find, compare and book sports venues in one place.

THE PROBLEM

Sports venues need a clear way to publish availability, facilities, rules and location while players need a fast route to discovery.

CREDIT / ROLE

Haekal Alexander Dinova. Admin module + home screen (team project)

Repository snapshot 0887628

SOLUTION & STACK / 01

RagaSpace

HOW IT WORKS

I owned the admin module described in the team README: venue creation/removal, facilities, venue rules, locations and schedules. I also built the home screen.

FEATURES

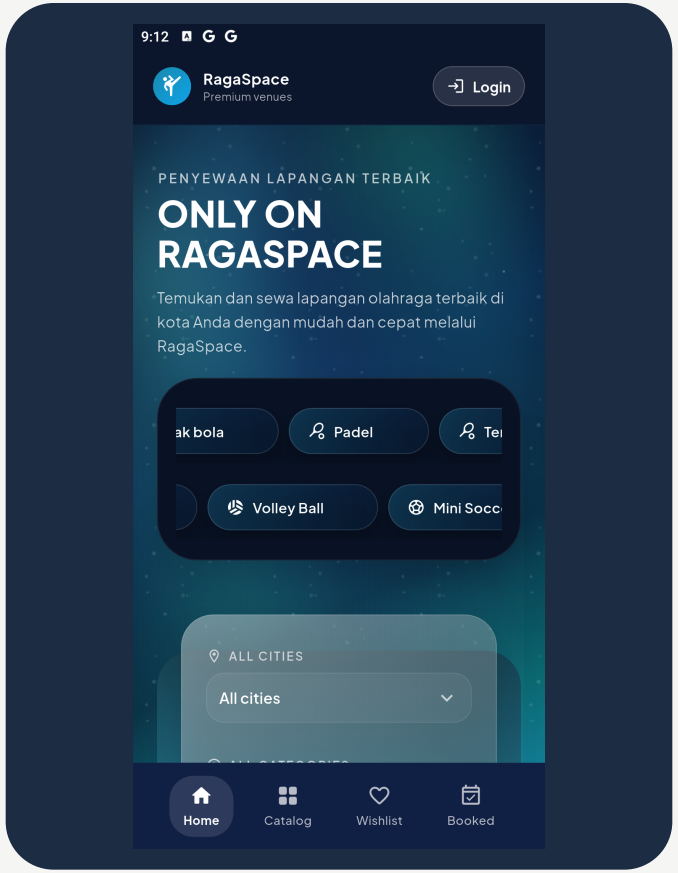

- Venue and schedule administration
- Sports category and city discovery
- Home screen for browsing venues

RagaSpace

City selector

Venue filters and search

Registration form

Source: https://github.com/Kelompok-C07-PBP-C/TKPASMobileRagaSpace

RESULT & HANDOFF / 01

RagaSpace

VERIFIED OUTCOME

The Android APK built successfully, installed in BlueStacks, and opened in portrait mode. Home, city selection, venue filters, login and registration states were captured from the running app. A local chip layout edit improved the initial view; another scrolling state still showed an overflow in the emulator.

LOCAL CHECK

RUN: Android APK built and launched in BlueStacks; live portrait screens captured. Local UI fix is uncommitted.
